

Cloud-Native Mobile Application Case Study

SenecaGlobal's client, In-telligent, utilizes a sophisticated API framework within AWS to bring its emergency communications technology to new communities.

The most recent addition to In-telligent's suite of applications is BuzzBell, a communications service which allows users to be sure their loved ones receive critical messaging, despite do-not-disturb settings

About the Client:

In-telligent is an emergency alert technology platform that is designed to keep people more informed and safer during emergency and time-sensitive events. The platform guarantees quick delivery, access to, and viewing of messages by the right people in the right place even under the most severe and challenging conditions. The platform supports a vast number of users and devices, across many countries and entities around the world.

The Challenge

- Increase the efficiency of existing API's while expanding application functionality
- Keep costs down as user-base grows
- Ensure reliable application performance

The Solution

- Utilize Lambda functions to provide all compute scaling
- Establish an ElastiCache framework running Redis
- Set up new API Gateway for environment

"SenecaGlobal worked with us to expertly leverage the tremendous power, security and reliability of AWS. We look forward to continuing our strong relationship with them!"

-AI Sutherland, Founder, CEO and President of In-telligent LLC

In-telligent, SenecaGlobal, & AWS

In-telligent's business necessitates reliable partners who can ensure its suite of applications remain online at the most critical times – in emergency situations. In-telligent entrusts SenecaGlobal's dedicated team to engineer born-in-the-cloud applications. Additionally, SenecaGlobal manages and maintains In-telligent's ever-expanding AWS environment.

SenecaGlobal enjoys a deep partnership with AWS, allowing it to leverage a scalable, reliable infrastructure to bring the power and security of the cloud to clients like In-telligent.
