

JD Edwards Solutions

Move forward faster with expert JDE services

- JDE Application Extensibility
- JDE Migration Management
- JDE Managed Services

JD Edwards (JDE) enterprise resource planning (ERP) solutions have the functionality and flexibility companies rely on to get things done.

However, in today's competitive market, it can be difficult to find the right tech talent to make sure your system is aligned to current business needs and ensure it's ready for what's next. That's where SenecaGlobal delivers.

Whatever stage you're at with your JDE system, our team of senior technologists have the on-the-job experience and knowledge to optimize your current implementation, provide new functionality upgrades, and manage the system for you. Results include better performance and lower costs for IT staff, application and system maintenance.

OPTIMIZE

JDE Application Extensibility

- Evaluate your business plan and ERP assets
- Provide recommendations on how to streamline the JDE solution to meet your business needs more efficiently
- Add new processes, re-engineer existing processes, add third party applications, or integrate other applications to extend your footprint

UPGRADE

JDE Migration Management

- Perform environment audits, document findings, and provide recommendations based on industry and Oracle best practices
- Follow a proven methodology to transition to JDE EnterpriseOne (E1) application to benefit from JDE's newest features and functionality
- Implement change management strategy and training to ensure successful transition for system users

MANAGE

JDE Managed Services

- Offer 24/7 operations support
- Enable access to help desk tools, reporting, and global ticketing services
- Monitor applications, databases and system performance
- Ensure security standards and compliance

Turning ERP challenges into opportunities

Our senior technologists have over 25 years of implementation experience, ranging from standard to complex. We can provide a rapid start project to get you up and running in about 90 days with preconfigured modules. Full-suite custom projects are delivered in approximately 6 – 12 months.

Experts on tap

Our team of JDE experts have the application and industry expertise to optimize your current system, manage standard and complex implementations and ongoing operations.

They hold certifications across all the JDE applications, as well as for many popular third-party applications.

Proven track record

The SenecaGlobal team has managed hundreds of implementations, upgrades and support projects with measurable results.

For example, SenecaGlobal manages the JDE solution for a major U.S.-based private food manufacturer. Over two years, we've saved the company \$2.6 million – a 30% cost reduction – as well as reduced the time to close their books by 50%.

Process-driven methodology

Best practices inform every step of SenecaGlobal's project plans. We provide a rapid start option to get you up and running in about 90 days by taking advantage of preconfigured models. Full suite custom implementations are ready to go in 6 to 9 months.

Focus on long-term success

In addition to addressing your technology needs, we can help with change management. We'll not only ensure that all processes work, but also make sure your people are engaged, trained, and feel a sense of ownership for how decisions are made and understand the impact on your business operations.

SenecaGlobal's **JDE World Migration Acceleration Program**

takes the pain out of the process of migrating from World to E1. During a guided virtual or in-person 2-day audit of your current platform, our JDE experts will uncover the data needed to build a customized migration plan, scope out budget/resource requirement and determine the project timeline.

Let's get started

Contact us now to speak with a SenecaGlobal JDE expert about how the two-day audit will accelerate your JDE World migration planning, so you can **move forward, faster.**
